

A new viscometer and a new line of special slitting machines for GAMA International

Milan, 8th May 2020 - GAMA International announces the development of new viscometers for the label market. The GAMA viscometers are therefore enriched with a new system, the **G39**, which allows the operator to control, correct and maintain the levels of viscosity, temperature and pH set during the start-up phase.

GAMA International has also launched a new line of special machines for converting, slitter-rewinders for aluminium, film and paper thanks to a cooperation agreement with H7Group.

A new viscometer for labels

The **new G39 system** is suitable for the control of pH, temperature and viscosity and for the automatic correction of solvent and water based inks. It is also able to control the viscosity and the temperature of UV inks. In case of multiple inks uploaded in the printing machine, the G39 software is able to recognize the ink type and to run the respective control and correction process.

These new valuable products can be integrated on a new narrow web printing press or installed as an update on a machine already in production.

«The development of a new viscometer – specifically designed for the label market – is the result of the collaboration of our R&D department with our industry partners», comments Sante Conselvan, Managing Director of GAMA International. «Our viscometers line is now the most advanced and the most complete one in the packaging market».

Slitter-rewinders entered the portfolio of GAMA International

Following an agreement signed with H7Group, a mechanical company based in Italy, GAMA International has added a complete line of slitting-rewinding machines to its portfolio.

The products include a wide range of slitter-rewinders, embossers, spoolers and extractors. Here are the main products:

- the **TR-M2T**, a four-shaft rewinding machine with automatic transmission; it is appropriate for cutting film with 10-1000µm thickness, 1,500mm width and 600m/min speed;
- the **TR-B2S**, a central drum cutter with peripheral center winding on two independent shafts designed for processing aluminium with 4-400µm thickness, 1,500mm width and 600m/min speed;
- the **TR-G1**, a high performance single-shaft paper cutter for 10-700gr/m², 500-2000mm width and 1,300 m/min speed.

GAMA International can also develop special slitting-rewinding machines based on the customer's request, and upgrade the installed machines (with mechanical and electronic enhancements), in order to improve the performance and to comply with the new safety standard rules.

«We will take care of the sales and service of this new line of products», comments Elisa Conselvan, Marketing Director of GAMA International. «An important aspect is the set up of a team of specialists headed by Riccardo Conca, our Product Manager, who will manage and analyze all the new configurations and the upgrading operations. We have designed a special machine for aluminium and the feedback received by the customers is very positive. We expect to do a good business with these solutions, as we see they meet many unsatisfied needs of converters».

About GAMA and GAMA International

GAMA designs and produces automatic control systems for inks, paints, glues and adhesives, web-guide systems and format counting systems for packaging, labels and converting processes.

GAMA installed over 12,000 systems worldwide. GAMA solutions are sold to customers in the packaging, labels, newspapers, commercial printing markets and as OEMs solutions to manufacturers.

GAMA International was founded to increase the presence of GAMA's products on international markets and to implement a distribution network; it is active also in Marketing and After-sales activities. For a wider presence in the American market, in 2016 GAMA Americas was established, based in York (PA). Beyond Ink quality control systems, GAMA International also offers Intralogistic solutions – such as storages for reels and sleeves – Slitting rewinding solutions, Cleaning systems for photopolymer plates and anilox rollers.
